FERRY BUILDING, SAN FRANCISCO, ONE HALF THE UPPER FLOOR OF WHICH IS OCCUPIED BY THE STATE MINING BUREAU.
(This building is constructed of Colusa Sandstone and the reconstructed tower is of reinforced concrete.)

CALIFORNIA MINES AND MINERALS

Compiled by CHAS. G. YALE, Statistician State Mining Bureau.

THE mining interests of the State of California are so diversified, and the industry is extended over so wide an area, that it is difficult to describe the conditions which exist without using many pages of printed matter.

For this reason it has been considered proper, in this pamphlet, to give merely a record of results, which will show in plain figures what is being accomplished by the miners of the State. This record shows that some forty mineral substances are being exploited, the annual valuation of which is now \$43,069,227, and increasing as capital is invested and more mines are opened. The older mines, too, having been well developed and equipped, are increasing their annual output, and thus also proving their permanency and value with depth. For the past 19 years the total mineral output of California amounts to \$505,699,408.

The climatic conditions are favorable to mining operations throughout the State, and means of transportation have been so improved as to greatly lessen costs of supplies, etc. There are abundant opportunities for the safe and profitable investment of capital in the various branches of the industry, as numerous claims which have been located have never been properly developed or equipped, their owners lacking the necessary means.

The State Mining Bureau, maintained by State aid, provides numerous publications in the form of Bulletins or Reports, giving in detail the conditions existing in gold, copper, quicksilver, and all the various branches of mining. It also publishes maps of the counties which show the location of all mines, roads, streams, etc. The Bureau is in charge of a State Mineralogist, who has a corps of trained Field Assistants, and an office force as well. There is a fine technical library, and a very large museum showing specimens of all mineral products, suitably arranged for reference. There is also a well-equipped laboratory for the determination of minerals.

The Bureau publishes, among other things, an annual Statistical Bulletin showing by counties the output and value of all substances mined or quarried in California. From the latest bulletin of this character, covering the calendar year 1905, the figures and tables given in this pamphlet are taken, in the belief that they will give, perhaps, the best idea of what the mines of the State are producing and what the miners are accomplishing.

TOTAL MINERAL PRODUCT OF CALIFORNIA FOR 1905.

The following table shows the yield and value of mineral substances of California for 1905, as per returns received at the State Mining Bureau, San Francisco, in answer to inquiries sent to producers:

	QUANTITY.	VALUE.		QUANTITY.	VALUE.
Asbestos	112 tons	\$2,625	Macadam	1,440,455 tons	\$942,503
Asphalt	40,304 "	285,290	Magnesite (Crude)	3,933 "	16,221
Bituminous Rock	24,753 "	60,436	Marble	73,303 cu. ft.	129,450
Borax	46,334 "	1 019,158	Mineral Paint	754 tons	4,025
Cement	1,265,553 bbls.	1,791,916	Mineral Water	2,194,150 gals.	538,700
Chrome	40 tons	600	Natural Gas	148,345 M cu. ft.	102,479
Clays (Brick)	286,618 M	2,273,786	Paving Blocks	3,408 M	134,347
Clays (Pottery)	133,805 tons	130,146	Petroleum	34,275,701 bbls.	9,007,820
Coal	46,500 "	144,500	Platinum	200 oz.	3,320
Copper	16,997,489 lbs.	2,650,605	Pyrites	15,503 tons	63,958
Fuller's Earth	1,344 tons	38,000	Quicksilver	24,655 flasks	886,081
Gems		148,500	Rubble	1,183,802 tons	774,267
Glass Sand	9,257 "	8,121	Salt	77,118 "	141,925
Gold		19,197,043	Sandstone	302,813 cu. ft.	483,268
Granite	228,788 cu. ft.	353,837	Silver		678,494
Gypsum	12,850 tons	54,500	Slate	4,000 squares	40,000
Infusorial Earth	3,000 "	15,000	Soapstone	300 tons	3,000
Lead	533,680 lbs.	25,083	Soda	15,000 "	22,500
Lime	616,995 bbls.	555,322	Tungsten	52 "	18,800
Limestone	192,749 tons	323,325			
Lithia Mica	25 "	276			
			Total value		\$43,069,227

The principal increases to be noted for 1905 over the previous year are \$87,443 in the gold; \$690,011 in petroleum; \$252,109 in cement; \$327,240 in clays for brick and pottery; \$320,348 in borax; \$236,118 in limestone; \$41,754 in mineral waters; \$19,813 in lead; and \$12,500 in gems. The largest increase is seen to be in the value of the petroleum.

The total value of the metallic substances (including precious metals) for 1905 was \$23,523,984, which includes gold, silver, pyrites, quicksilver, copper, lead, manganese, platinum, chrome and tungsten. The silver is given in commercial value. Tungsten appears in the column for the first time, and there is a notable increase in the amount of platinum saved.

The value of non-metallic substances was \$2,145,930, including borax, salt, mineral waters, soda, asbestos, coal, fuller's earth, gypsum, infusorial earth, lithia mica, magnesite, mineral paint, and gems.

The total value of hydrocarbons and gases was \$9,456,025. The hydrocarbons include asphalt, bituminous rock, natural gas, and petroleum. In 1904 the product of petroleum in the State was 29,736,003 barrels, worth \$8,317,809. In 1905 it was 34,275,701 barrels, valued at \$9,007,820. The increase in output for the year is thus shown to be 4,539,698 barrels, and in value \$690,011.

In structural materials the total value for the year was \$7,943,288, an increase over 1904 of \$668,442. These materials include lime and limestone, macadam, glass sand, marble, granite, sandstone, paving blocks, rubble, slate, soapstone, brick and pottery clays, and cement. In the latter substance the increase in the output for the year amounted to 296,015 barrels, the number made in 1905 being 1,265,553 barrels.

The relative value of the principal mineral products of the State is as follows: 1st, Gold; 2d, Petroleum; 3d, Copper; 4th, Clays and their products; 5th, Cement; 6th, Borax; 7th, Macadam; 8th, Quicksilver; and 9th, Rubble.

While gold is still the leading mining product, its yield no longer puts the greatest gold-producing county in the first place. The petroleum of Kern County, together with its other mineral products, gives it the leading place as a mineral-producing county. Yet the highest value of any single product in any county was that of gold in Nevada County, \$3,179,715. Gold is more widely distributed than any other substance thus far mined in California; 35 counties out of the 57 in the State showing a gold yield in 1905, and it is known to exist in several others. The order in rank of the counties of the State, in the production of gold alone, is at present as follows:

COUNTY RANK IN GOLD PRODUCT IN 1905.

1. Nevada	\$3,179,715	13. San Bernardino	\$473,893	25. Riverside	\$35,690
2. Butte	2,607,500	14. Mariposa	386,380	26. Los Angeles	15,035
3. Amador	2,445,815	15. El Dorado	384,735	27. Del Norte	10,590
4. Calaveras	1,736,816	16. Yuba	324,135	28. Monterey	4,000
5. Tuolumne	1,291,726	17. Mono	308,884	29. Tulare	2,300
6. Kern	1,160,971	18. Plumas	283,810	30. Ventura	1,200
7. Siskiyou	803,035	19. Inyo	135,959	31. Santa Barbara	725
8. Trinity	690,844	20. San Diego	109,712	32. Alpine	575
9. Shasta	684,952	21. Madera	50,867	33. San Luis Obispo	300

1862.....	38,854,668	1877.....	16,501,268	1892.....	12,571,900	Total..	\$1,434,053,311

BANNER COUNTIES IN DIFFERENT MINERAL PRODUCTS—1905.

As far as the "banner" counties in the different mineral products are concerned, the following is the record for 1905, with the value of the material in which the county leads. It should be explained, however, that certain substances are put under the heading of "unapportioned," which includes product of single mines, etc., in counties, so as to conceal their identity. For this reason it is necessary to put under this heading, borax, soda, coal, Portland cement,

fuller's earth, magnesite, some gold and silver, and a few other substances formerly credited to certain counties. This causes an apparent, but not real, falling off in output of Lassen, Los Angeles, Napa, San Bernardino, Siskiyou, and a few other counties where these "unapportioned" substances occur. If credited to the exact county, where there is only a single operator, private business would be made public. Under these circumstances, the figures of value of output in some counties do not actually represent their relative rank, as some of the products may be placed under "unapportioned." Moreover, some counties lead in output of some substances placed in the "unapportioned" column, and these substances do not therefore appear after the name of the county, thus reducing the county total.

Alameda County leads in macadam (\$441,587) and pyrites (\$63,958); Butte in platinum (\$1,770); Colusa in sandstone (\$276,908); El Dorado in asbestos (\$2,625) and slate (\$40,000); Inyo in lead (\$16,247); Kern in lime (\$255,500), petroleum (\$3,174,966), and tungsten (\$18,800); Lake in mineral waters (\$219,500); Los Angeles in asphalt (\$119,430), brick clays (\$853,810), and gypsum (\$43,500); Madera in granite (\$123,106); Monterey in glass sand (\$8,121); Nevada in gold (\$3,179,715); Riverside in rubble (\$215,229); San Benito in quicksilver (\$279,651); San Diego in lithia mica (\$276) and gems (\$66,000); San Joaquin in natural gas (\$53,915); San Mateo in salt (\$67,500); Santa Barbara in infusorial earth (\$15,000); Santa Cruz in bituminous rock (\$42,500); Shasta in copper (\$1,688,614) and silver (\$167,548); Solano in limestone (\$100,000); Sonoma in paving blocks (\$66,785); Stanislaus in mineral paint (\$2,125); Tuolumne in marble (\$66,000). The unapportioned list includes borax, cement, coal, fuller's earth, magnesite, soapstone and soda; so none of these substances are considered in making up the leading products of the individual counties.

It will be noted that two counties lead in three substances: Kern and Los Angeles; four in two, Alameda, El Dorado, San Diego, and Shasta; sixteen in one, Butte, Colusa, Inyo, Lake, Monterey, Nevada, Riverside, San Benito, San Joaquin, San Mateo, Santa Barbara, Santa Cruz, Solano, Sonoma, Stanislaus, and Tuolumne.

To show the wide distribution of mineral substances in California, an analysis of the statistical table for 1905 published by the State Mining Bureau (Bulletin No. 42) proves that all of the 57 counties of the State, except three, made some mineral product in that year. Gold was mined in 35 counties and is known to exist in several others; silver and brick-clays in 27; rubble in 19; mineral waters in 16; macadam in 13; copper and lime in 12; quicksilver and pottery clays in 11; granite in 10; platinum, sandstone and limestone in 9; petroleum in 7; gems and marble in 5; borax, salt, asphalt, cement, and paving blocks in 4; coal and natural gas in 3; chrome, lead, fuller's earth, gypsum, magnesite, mineral paint, and bituminous rock in 2. The following substances were each produced in one county: Pyrites, tungsten, asbestos, infusorial earth, lithia mica, glass sand, slate, and soapstone.

CALIFORNIA MINES AND MINERALS

Issued by the

CALIFORNIA STATE MINING BUREAU

LEWIS E. AUBURY

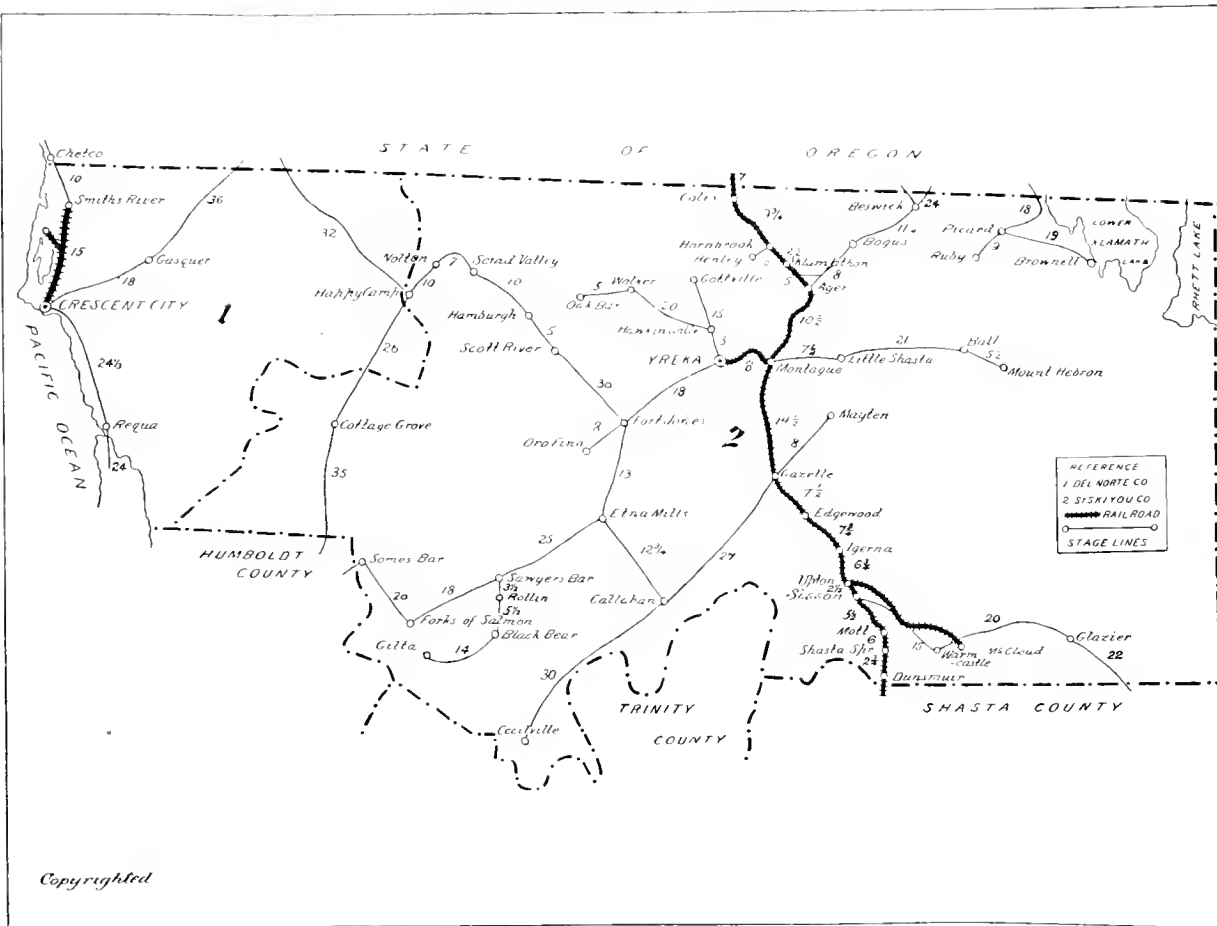

State Mineralogist

PACIFIC OCEAN

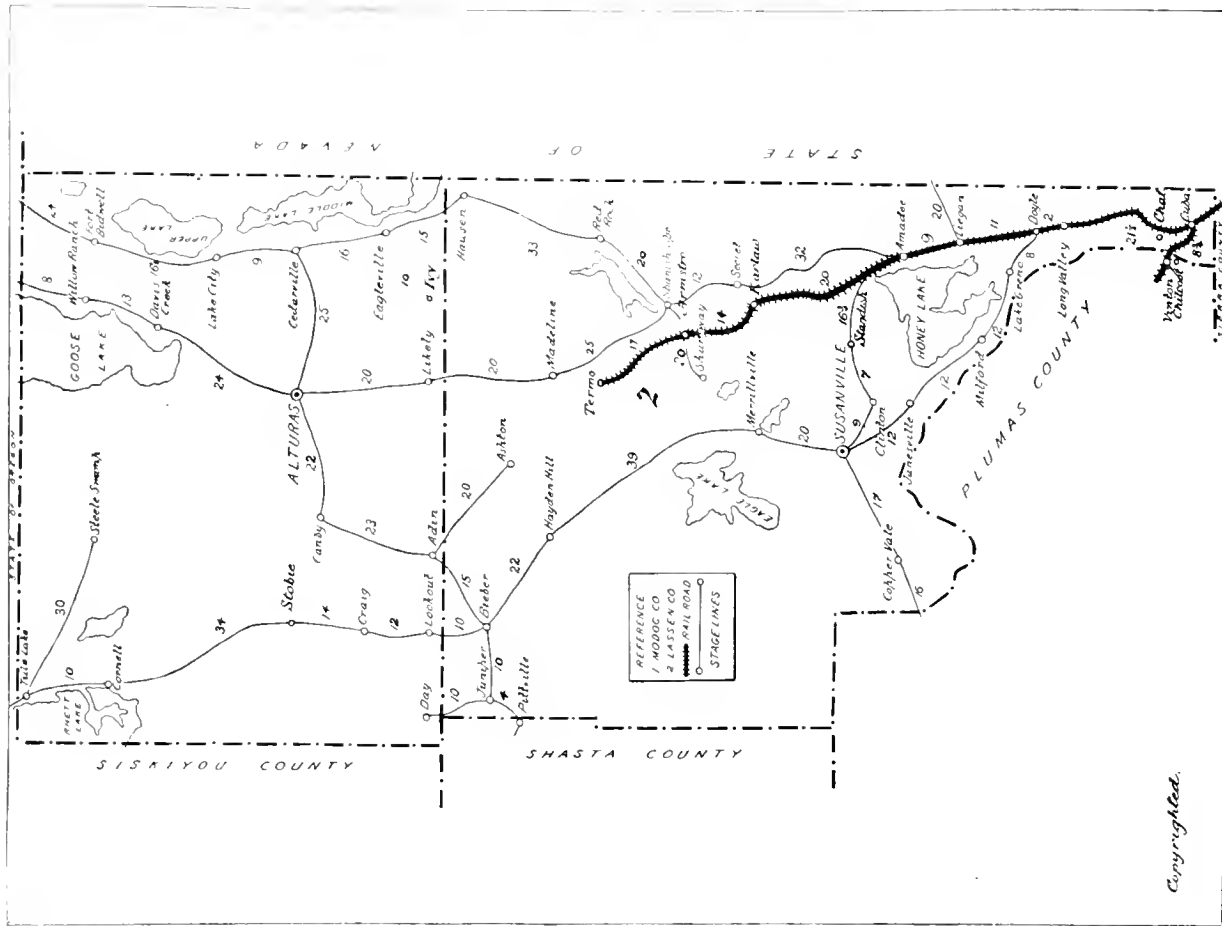

The County Maps.

They show all towns, postoffices, railroads, county roads, stage lines carrying passengers, mail and express, and distances between points, forming a handy and useful guide, especially to all who wish to leave the railroad and penetrate to the interior of the mining districts.

LIST OF PUBLICATIONS OF THE CALIFORNIA STATE MINING BUREAU.

FERRY BUILDING, SAN FRANCISCO, CAL.

Publications of this Bureau will be sent on receipt of the price and requisite amount of postage. Only stamps, coin, or money orders will be accepted in payment. *All publications not mentioned are exhausted.*

Under Section 8, amendment to the Mining Bureau Act, approved March 10, 1903, attention is respectfully called to that portion of the amendment which states: "The Board (Board of Trustees) is hereby empowered to fix a price upon, and to dispose of to the public, at such price, any and all publications of the Bureau, including reports, bulletins, maps, registers, etc. The sum derived from such disposition must be accounted for and used as a revolving printing and publishing fund for other reports, bulletins, maps, registers, etc. The prices fixed must approximate the actual cost of printing and issuing the respective reports, bulletins, maps, registers, etc., without reference to the cost of obtaining and preparing the information embraced therein."

Samples (limited to three at one time) of any mineral found in the State may be sent to the Bureau for identification, and the same will be classified free of charge. It must be understood, however, that *no assays, or quantitative determinations, will be made.* Samples should be in lump form if possible, and marked plainly on outside of package with name of sender, postoffice address, etc. A *letter* should accompany sample, and a *stamp* should be inclosed for reply.

**LAW RELATING TO MISREPRESENTATIONS OF MINES BY AN
TRANSACTIONING BUSINESS IN CALIFORNIA. APPRO**

SECTION 1. Any superintendent, director, secretary, manager, or other officer or agent of any corporation, or any person acting in any capacity, who shall willfully subscribe, sign, endorse, verify, or otherwise assent to, or shall cause to be published or distributed, any report, prospectus, account, statement, or other paper or document containing any untrue or willfully and fraudulently exaggerated report, prospectus, account, statement, or other paper or document, with the intention of inducing any person to purchase or subscribe for any shares of stock in such corporation, or with the intention of producing or giving, to the shares of stock in such corporation, a market value greater than they really possess, or with the intention of defrauding the public, or persons generally, shall be deemed guilty of a felony, and shall be punished by imprisonment in State prison, or a county jail, not exceeding five thousand dollars, or by both.

SEC. 2. All acts and parts of acts in conflict with this act are
